

NGO HOANG SANG

BACKEND DEVELOPER (FRESHER) — .NET / ASP.NET CORE

Email: hoangsang998@gmail.com | Phone: 0337.589.146

GitHub: github.com/bapp234 | Location: Binh Tan District, Ho Chi Minh City

PROFESSIONAL SUMMARY

Final-year Information Technology student specializing in backend development with .NET Core / ASP.NET Core and a solid foundation in OOP and SOLID principles. Hands-on experience designing RESTful APIs, relational database schemas, and authentication/authorization mechanisms (JWT). Comfortable working with SQL Server and PostgreSQL, and familiar with Microservices concepts and Docker-based workflows. Eager to apply strong analytical thinking and a fast-learning mindset to build and maintain reliable backend systems in a professional engineering team, particularly within the financial technology sector.

TECHNICAL SKILLS

Backend & APIs: .NET Core, ASP.NET Core Web API, Entity Framework Core (EF Core), RESTful API Design, JWT Authentication

Languages: C#, Java, Python, JavaScript/TypeScript, SQL, C++

Databases: SQL Server, PostgreSQL (schema design, indexing, query optimization)

Architecture & Practices: OOP, SOLID Principles, Microservices (fundamentals), Basic Agile

Tools & DevOps: Git/GitHub, Docker, Postman, Visual Studio, VS Code

Frontend (supporting): ReactJS, Redux, HTML5/CSS3, WPF (MVVM)

ACADEMIC & PERSONAL PROJECTS

Full-Stack Web Application — ASP.NET Core, ReactJS

04/2026 – 05/2026

- Engineered RESTful APIs using ASP.NET Core and Entity Framework Core to handle client requests efficiently, focusing on clean endpoint design and maintainable backend structure.
- Secured the application by implementing JWT authentication and authorization to protect user data and control API access.
- Integrated the backend with a ReactJS SPA frontend, ensuring efficient data exchange and minimizing page load times.

Task Management Desktop Application — C#, WPF, SQL Server

04/2025 – 05/2025

- Designed the SQL Server database schema with optimized indexing, accelerating task query response times.
- Developed a C#/WPF application using strict MVVM architecture to cleanly separate business logic from UI, reinforcing OOP and SOLID design practices.
- Implemented an automated task scheduling module to enhance daily productivity.

EDUCATION

Saigon Technology University (STU), Ho Chi Minh City — Bachelor of Information Technology

Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Software Engineering, Object-Oriented Programming
